

ClouDamize provides high precision analytics and powerful automation to improve the ease, speed, and accuracy of moving clients to the cloud, so systems integrators and cloud consultants can accelerate cloud adoption and migration, and ultimately cloud revenue objectives.

Assess

How can we instill confidence to adopt the cloud & shorten sales cycles?

Calculate the TCO of moving to the cloud and predict performance with precision to ensure confidence in the decision to migrate and speed adoption.

Plan

How can we make migration planning faster and repeatable?

Efficiently design a successful roadmap to the cloud based on application dependencies, suitability, and readiness.

Migrate

How can we satisfy customers and get to recurring revenue faster?

Integrate your plan into any cloud migration tool to quickly move workloads to the cloud and ensure cost-performance optimization at the moment applications migrate.

What our customers say

“With ClouDamize, I was able to get a quick and accurate TCO estimate that was based on our actual usage data.”

JOSH BLENDER, SENIOR ENGINEER, YEXT

“With ClouDamize, we optimized our current cloud deployment and are now able to make confident planning decisions to support our needs.”

UMGANG GOPANI, SR. SYS ADMIN, NIMBLE COMMERCE

Cloudamize Cloud Computing Analytics Platform

Precisely Calculate Cloud TCO

- » **Cloud TCO Calculator:** Calculate the TCO of moving to the cloud based on recommended right-sized compute, storage, and network settings.
- » **Cloud Cost Breakdown:** Break down projected costs by compute, storage, and network, and drill down to individual workloads to understand costs at a micro level.

Plan Migrations with Precision

- » **Automated Discovery & Dependency Mapping:** Identify every application and all of their dependencies, including 3-tier/n- tier application dependencies, across on-premises and cloud environments.
- » **Application Suitability & Complexity Analysis:** Understand which applications to migrate and when based on application classification, dependencies, platform portability, and performance profiles.

Migrate with Speed & Accuracy

- » **Migration Integration:** Cloudamize installs your migration tool to speed the process of moving workloads to the cloud.
- » **Mitigation Plan Report:** Import the migration plan built in Cloudamize into existing migration tools and for each move group view its host name and its compute, network, and storage settings in the cloud.

Automate Performance Analysis

- » **Performance Analysis:** Receive a detailed performance analysis of on-premises compute, storage, and network resources for each workload, including peak CPU utilization, allocated and peak RAM usage, storage capacity, occupancy, IOPS, and more.
- » **Performance Projection:** View the projected performance of compute, storage, and network resources for each workload to understand current performance vs. performance with right-sized settings in the cloud.

Easily Design Migration Plans

- » **Migration Designer:** Manually group applications based on their dependencies, business uses, migration phases, tags, and more.
- » **Intelligent Move Groups:** Automatically group applications based on characteristics such as application or machine names, dependencies, application class, cost, migration phase, and more.

Optimize Cost & Performance

- » **Compute Right-Sizing Planner:** Receive the best possible compute option in the cloud for each workload to ensure you're meeting performance requirements at the lowest possible cost upon migration.
- » **Storage Right-Sizing Planner:** Receive the best possible storage option for each workload to ensure cost-performance optimization at the moment you migrate.
